Projects

traveList   August 2017

- A React web application that generates packing lists for trips based on planned activities and individual user preferences. Also features integration with weather API to generate forecast for the trip.

cycSlope   June 2017

- A responsive bicycle route planning web application that provides bicycling directions to a selected destination. Generates several route alternatives and displays them alongside the elevation profile for each respective route.

Classic Models   July 2017

- A full-featured e-commerce site built using React and Redux that sells a selection of model cars, trains, and more. Integration with Stripe API to allow for customer checkout.

Weather Widget   July 2017

- Weather widget built using React and Redux that displays current weather and a five-day forecast for a selected city at a glance.
